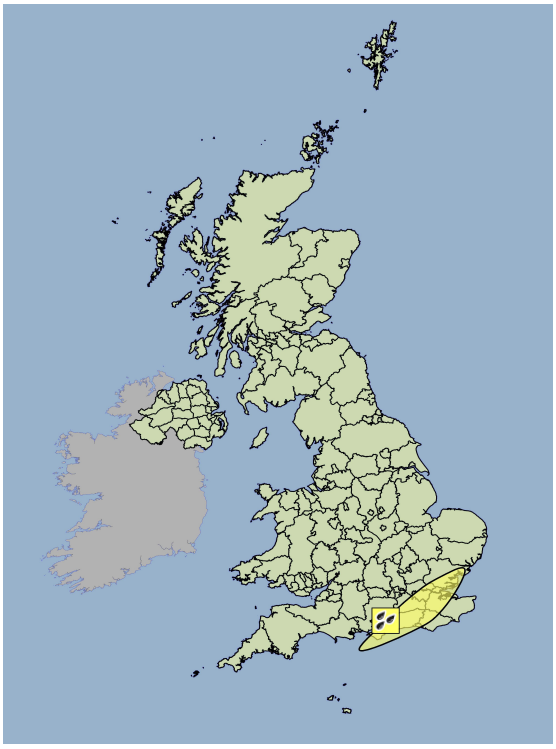
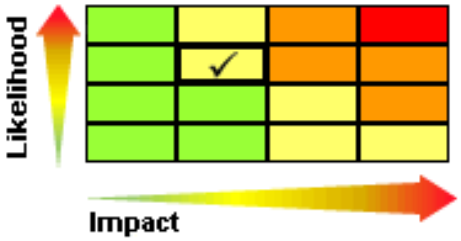
National Severe Weather Warning Service





Chief Forecasters Assessment
Bands of showers overnight have brought some heavy rainfall to parts of the southeast of England resulting in some surface water flooding. Although showers will tend to ease through the morning, (with mostly less than 10 mm additional rainfall), the residual impacts, especially in terms of surface water flooding, are more likely to last into the middle part of the day.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **07:50 on Fri, 17th Jan 2014** until **14:00 on Fri, 17th Jan 2014**

Further showers, some heavy, will affect parts of the southeast of England this morning, dying away by early afternoon.

The public should be aware that, given the saturated ground, some disruption from localised flooding is likely.
